Natural numbers begin at one, increment by 1, and go on forever. Natural numbers do not include negative numbers or zero.

You’re always telling me that I’m a natural, but you’re never telling me at exactly what.

Prime numbers are natural numbers greater than one that are not produced by multiplying two other natural numbers together.

Do you think we'll ever make it to prime time?

The Fibonacci sequence begins with zero, then one, then the subsequent numbers are the sum of the prior two numbers.

This number sequence exists in nature as petals on a flower, spirals on a seashell, and swirls on a pinecone.

Palindromic numbers are the same number when the number's digits are reversed.

A friend of mine recently purchased a new automobile:
A Toyota

Permutable prime numbers are those where the number is a prime no matter how you mix the number's digits around.

You mean, no matter if the number's digits are shaken or stirred?

Then there is the magic number sequence, which is the number of protons or neutrons that fill a shell to create a stable atom.

Hmmm ... maybe I should have my shells counts checked ... I've been feeling a little unstable lately.
